PROFFESSIONAL SUMMARY

Azure Data Engineer with **4+ years of** IT **experience** and **4+ years specializing in Azure Databricks and Lakehouse architectures.** Proven expertise in designing and delivering **scalable batch and real-time data pipelines** using **Azure Databricks, PySpark, Delta Lake, and Azure Data Factory.** Strong background in **Medallion (Bronze-Silver-Gold) architecture,** data governance, **CI/CD automation**, and performance optimization for enterprise and regulated domains.

- **Engineered and deployed scalable, end-to-end data pipelines on Azure** using Azure Databricks, Azure Data Factory (ADF), and Apache Airflow, integrating diverse sources including ADLS Gen2, Blob Storage, SQL Server, PostgreSQL, MongoDB, and REST APIs.
- **Architected automated infrastructure using Terraform (IaC)** to provision, manage, and scale cloud data resources, ensuring reproducible deployments across environments.
- **Built and automated Delta Live Table (DLT) pipelines** using Auto Loader for low-latency streaming and batch ingestion, enforcing automated schema validation and data quality guarantees at scale.
- **Developed modular, reusable Databricks notebooks and Spark jobs** in Python, Scala, and SQL, implementing ACID transactions, time travel, and performance optimization techniques.
- **Implemented enterprise data governance and security** using Azure Databricks Unity Catalog, Azure AD, RBAC, and fine-grained access controls, maintaining comprehensive metadata and data lineage documentation.
- **Orchestrated complex data workflows and CI/CD pipelines** using Azure DevOps/GitHub Actions, ADF, Databricks Workflows, and Kubernetes for seamless cloud application deployment.

SKILLS

Industries	: Retail, Telecom, Banking, Insurance, Defense & Aerospace
Functional Areas	: Requirement analysis, application design, Development & Implementation
Methodologies	: Agile Methodologies, Waterfall, Iterative, Continuous Improvement Model
Cloud & **Lakehouse**	**:** Azure Databricks, Azure Data Factory, ADLS Gen2, Delta Lake, Delta Live Tables, Unity Catalog, Auto Loader, Medallion Architecture, Lakehouse Architecture
Data Engineering	: ETL/ELT Pipelines, Data Modeling (Star Schema), Incremental Loads, Watemrnrking, Data Quality Frameworks
Programming Languages Scripts	: Python, SQL, PySpark, Scala (basic), C# (.NET Core), Shell Script, Bash Script, Java Script
Cloud Platforms	: Azure, AWS, GCP
Big Data Technologies	: Hadoop, MapReduce, HDFS, Hue, Kafka, Yam, Apache Spark, Sparklib, Machine Leaming, Artificial Intelligence, generative AI.
Databases	: Azure SQL, SQL Server, Synapse Analytics, MySQL, MongoDB
Development tools	: PyChann, Jupyter Notebook, VS Code, Postman, Visual Studio
Application Platform	: ASP .Net, .Net Core Web API, React JS
Visualization & **Reporting**	: Power BI (Data Models, Performance Optimization)
Azure	: Service Bus, Storage, App Services, Function App
Backend Development	: ASP.NET Core Web API, C#, RESTful API, Microservices, Dapper, Entity Framework Core
Frontend Development	: React.js (4 Years), JavaScript (ES6+), HTML5, CSS3, REST API Integration
SharePoint	: SharePoint On-Prem (2007/2010/2013), SharePoint Online, SPFx, Nintex Workflows
DevOps & **Monitoring**	: Azure DevOps (YAML *CUCD),* Git, Docker, RBAC, PII Masking, Data Lineage

PROFESSIONAL EXPERIENCE

Lighthouse Global — FEB 2025 – June 2026

Signovate Technologies — AUG 2022 – JAN 2025

Project Name: Healthcare Claims & Compliance Analytics Platform
Client: Optum
Role: Software Engineer
Technologies: Azure Data Factory, Azure Databricks, PySpark, Apache Spark, Spark SQL, Azure Event Hubs, ADLS Gen2, Delta Lake, Azure Synapse Analytics, SQL, Power BI, Salesforce, SAP, Track Wise, Azure DevOps, Git, CI/CD, Azure RBAC

Responsibilities:
• Developed ETL/ELT pipelines using Azure Data Factory, Databricks, PySpark, Spark SQL, and Delta Lake for healthcare claims and compliance data.
• Built automated ingestion pipelines from TrackWise, SAP, Salesforce, REST APIs, and Azure Event Hubs into ADLS Gen2.
• Implemented Lakehouse and Medallion Architecture with Bronze, Silver, and Gold layers using ADLS Gen2 and Delta Lake.
• Implemented CDC, incremental loading, and data quality checks to improve data processing and reliability.
• Created analytics-ready datasets using Azure Synapse Analytics and SQL for Power BI reporting and compliance analytics.
• Optimized PySpark and Spark SQL jobs using partitioning, caching, and query tuning.
• Managed CI/CD deployments using Azure DevOps and Git, along with Azure RBAC, audit logging, governance, and production support.

Project Name: Investor, Contact & Fund Manager - Reporting Platform
Client: **CSC Global**
Role: Software Engineer
Technologies: Azure Data Factory (ADF), Azure Databricks, Python (PySpark), ASP.NET Core Web API (Data Ingestion), Azure Data Lake Storage Gen2, SQL Server / Azure SQL, Power BI, Azure DevOps (CUCD)

Description:
Designed and implemented an enterprise data engineering and analytics platform to manage Investor, Contact, Fund Manager, and Regulatory Reporting data. The solution enabled centralized data ingestion, transformation, validation, and analytics, supporting KYC compliance, audit tracking, and regulatory report publishing.

Responsibilities:
- **Architected and delivered a centralized Azure data platform** from the ground up, directly supporting regulatory reporting and compliance analytics for stakeholders.
- **Implemented a high-performance Delta Lake-based lakehouse**, significantly optimizing storage costs and compute utilization across data pipelines.
- **Streamlined SFTP-to-ADLS Gen2 data ingestion and transformation** using Azure Databricks (PySpark) and Azure Data Factory (ADF), resulting in robust, reliable, and scalable ETL workflows.
- **Enforced strict enterprise security and compliance standards** by implementing PII data anonymization, dynamic data masking, robust access controls, and comprehensive data governance frameworks.
- **Built end-to-end pipeline observability** by designing custom logging and monitoring frameworks integrated with Azure alerts, drastically reducing incident response times and ensuring high pipeline reliability.
- **Accelerated project delivery and system stability** by actively driving System Integration Testing (SIT), Non-Functional Testing (NFT), and contributing to High-Level Design (HLD) documentation.
- **Bridged business and technical domains** by collaborating closely with stakeholders to translate complex requirements into scalable solution designs and data architecture.

Project Name: Minerva Audit

System Client: Minerva

Roles: Associate Software Developer
Environment / Tools: API, ASP .NET MVC, C#, React, Microservice, SQL, Power BI, Azure Services, OpenAI, Agentic AI

Project Overview: Developed a modern **audit management platform** enabling systematic review of financial transactions, statements, and accounting records. The solution automated evidence collection methods such as **physical examination, confirmations, documentation, analytical procedures, client inquiries, reperformance, and observation**, ensuring compliance and accuracy in audit reporting.

Roles & Responsibilities:

- **Engineered scalable RESTful microservices in C# and ASP.NET Core Web API** to process audit records, **reducing data retrieval latency by 40% and supporting concurrent access by 500+ auditors.**
- Built responsive dashboards and intake forms using **React.js and Microsoft Fluent UI, improving auditor productivity by 35% through standardized input flows.**
- **Optimized SQL Server performance with advanced T-SQL stored procedures, triggers, and complex joins, accelerating query execution by 50% for large financial audit logs.**
- Integrated **Azure Services** with role-based notifications, **cutting approval cycle times by 25% and enhancing collaboration across distributed auditor teams.**
- Leveraged **Power BI and Agentic AI to generate interactive audit reports, reducing manual reporting effort by 200+ hours per quarter and enabling predictive analytics for anomaly detection.**
- **Implemented secure API integrations with OpenAI for intelligent query handling, increasing anomaly detection accuracy by 30% and minimizing false positives in financial records.**

EDUCATION:
MCA from **Biju Patnaik University of Technology** with 8.0 CGPA
B.Sc. from **Berhampur University** with 8.55 CGPA

CERTIFICATION:
Azure Cloude AI developer Associate from **Microsoft** **JULY 2026 – JULY 2027**

DECLATION

I hereby declare that all the statements and information furnished above is true and complete to the best of my knowledge.
